

# Navbar Consistency Audit

AutoNateAI Learning Hub - Dashboard Sidebar

Generated: February 13, 2026

Branch: new-profile

## Quick Summary

12 dashboard pages audited

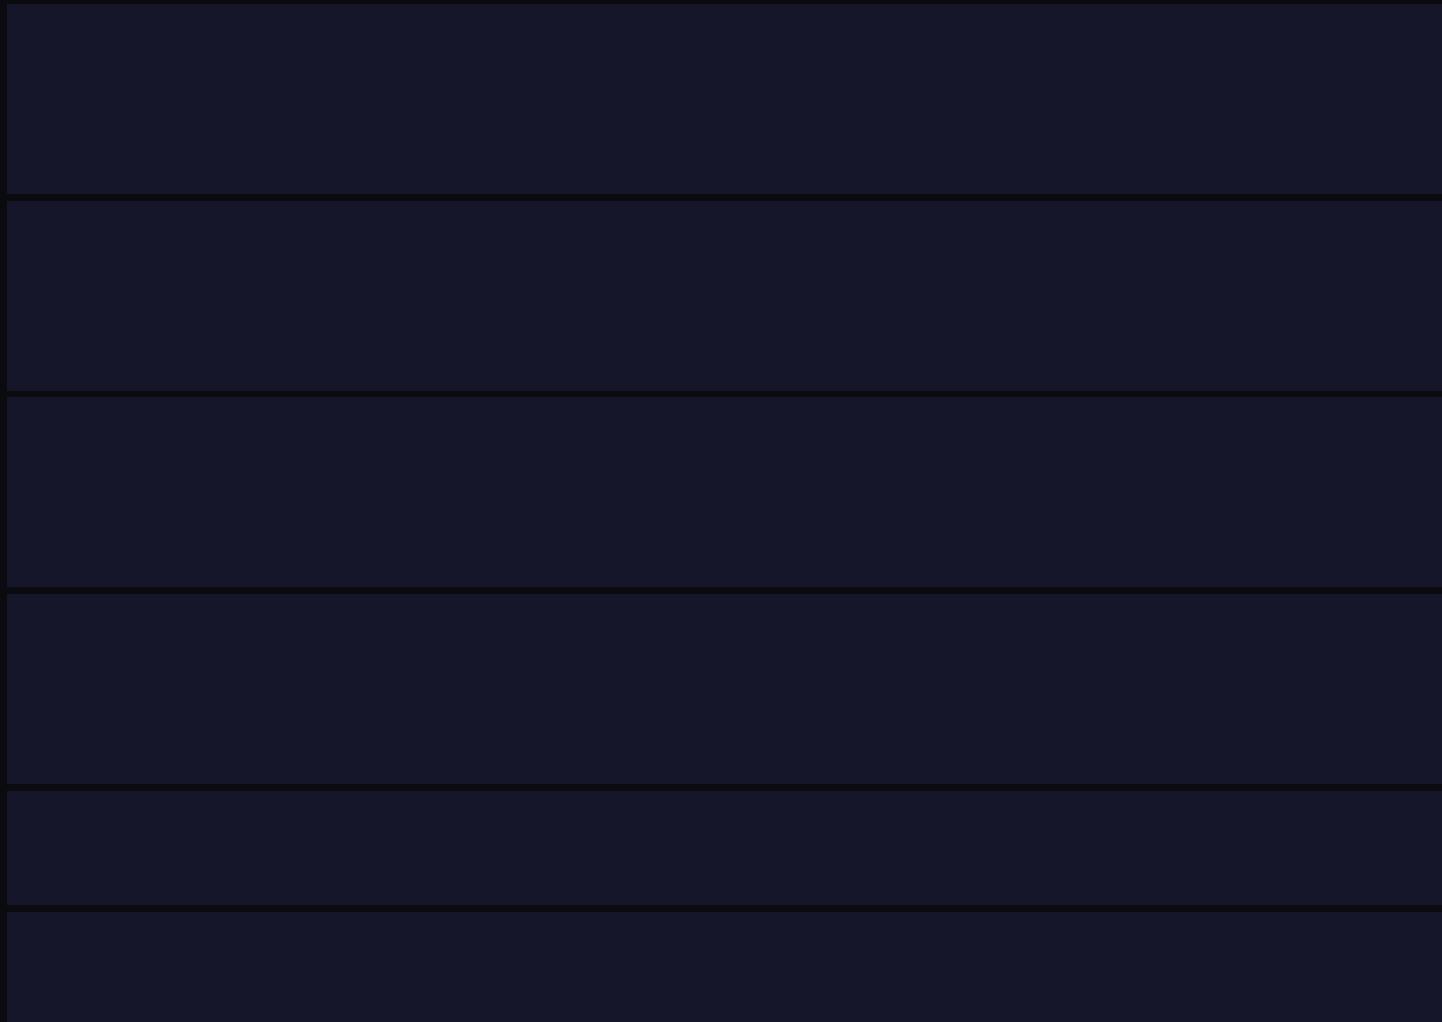

3 pages with sidebar issues

9 pages missing Basketball Section

## 1. Gold Standard Sidebar (index.html)

---

The index.html dashboard page contains the complete and correct sidebar navigation. All other dashboard pages should match this structure. Below is the expected layout:

## 2. Consistency Matrix

---

The table below shows which nav items are present on each dashboard page. A checkmark means the item is present; an X means it is missing.

Page	Dashboard	Courses	Challen	Progres	Achieve	Notes	Feed	Discord	Leaderb	Profile	Setting	Basketb
index	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK
courses	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
progress	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
achievements	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
challenges	OK	OK	OK	OK	OK	MISS	OK	OK	OK	OK	OK	MISS
leaderboard	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
notes	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
profile	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
settings	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
feed	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	OK	MISS
bball-sim	OK	OK	OK	MISS	MISS	MISS	MISS	MISS	MISS	OK	OK	OK

Rows highlighted in red contain one or more missing nav items.

course.html excluded - standalone viewer with no sidebar.

### 3. Detailed Issues by File

---

#### basketball-sim.html

[HIGH]

- Missing 6 nav items: Progress, Achievements, Notes, Feed, Discord, Leaderboard
  - Has only a stripped-down sidebar with Main (3 items), Basketball, Account sections
  - Missing entire 'Learning' section (Progress, Achievements, Notes)
  - Missing entire 'Community' section (Feed, Discord, Leaderboard)
  - Was added from upstream pull with minimal nav - needs full sidebar parity
- 

#### challenges.html

[MEDIUM]

- Missing 'Notes' link in the Learning section
  - Learning section only has Progress and Achievements, missing Notes
  - Missing Basketball Section (hidden by default)
  - All other nav items are present and correct
- 

#### Basketball Section (9 pages)

[MEDIUM]

- The Basketball nav section is only present in index.html and basketball-sim.html
  - Missing from: courses, progress, achievements, challenges, leaderboard, notes, profile, settings, feed
  - Section is hidden by default (display: none) and shown via JS for qualifying orgs
  - Should be added to all dashboard pages for consistency with index.html
  - Section HTML: <div class='nav-section' id='basketball-section' style='display: none;'>
-

## 4. Recommended Fix Plan

---

### Fix 1: basketball-sim.html - Add Full Sidebar

Replace the stripped-down sidebar nav with the full standard sidebar matching index.html. Keep the Basketball section visible (not hidden) since this IS the basketball page. Add the Learning section (Progress, Achievements, Notes) and Community section (Feed, Discord, Leaderboard) between Main and Account.

### Fix 2: challenges.html - Add Notes Link

Add the Notes nav item to the Learning section. Currently the Learning section has Progress and Achievements but is missing Notes. Insert the following after Achievements:

```
<li class="nav-item">
  <a href="notes.html" class="nav-link">
    <span class="nav-icon">NOTEPAD_ICON</span>
    <span class="nav-text">Notes</span>
  </a>
</li>
```

### Fix 3: Add Basketball Section to 9 Pages

Add the hidden Basketball section to all pages that are missing it. Insert it between the Account section closing `</div>` and the Admin section. Pages to update: courses, progress, achievements, challenges, leaderboard, notes, profile, settings, feed.

```
<!-- Basketball Section (hidden) -->
<div class="nav-section" id="basketball-section"
  style="display: none;">
  <span class="nav-section-title"
    style="color: #ef4444;">Basketball</span>
  <ul class="nav-list">
    <li class="nav-item">
      <a href="basketball-sim.html"
        class="nav-link">
        <span class="nav-icon">BBALL_ICON</span>
        <span class="nav-text">Play Simulator</span>
      </a>
    </li>
  </ul>
</div>
```

## 5. Future Recommendation: Shared Sidebar Component

---

Currently each dashboard page has the sidebar HTML duplicated inline. This means any nav change must be replicated across 11+ files, which is error-prone and caused the inconsistencies documented in this audit.

### Option A: JavaScript Include

Create a shared sidebar.js that injects the sidebar HTML into a placeholder div on each page. This eliminates duplication entirely - one file to update for all pages. The script can accept a parameter for which page is 'active' to highlight the current nav item.

### Option B: Server-Side Include / Build Step

If moving to a build system or server-rendered setup, use partials or includes to share the sidebar template across all pages.

### Option C: Web Component

Create a <dashboard-sidebar> custom element that encapsulates all sidebar logic and markup. Each page just includes <dashboard-sidebar active='feed'></dashboard-sidebar>.

#### NOTE

Implementing a shared sidebar component would prevent future inconsistencies and reduce maintenance overhead as new pages and sections are added.
